BromMax®

This product is an effective agent for controlling algae, bacteria and slime in condensing and cooling equipment in which recirculating water is used as the cooling medium and in reservoirs or ponds which serve as the source of boiler feedwater or cooling water. This product can also be used to control bacterial slime and algae in decorative fountains, air washers, papermill influent water systems, and food, beverage, and industrial process pasteurizers.

Active Ingredients:
- Sodium hypochlorite 10.70%
- Sodium bromide 14.77%

Inert Ingredients:
- 74.53%

TOTAL 100%

Total Available chlorine = approximately 10.2%
Total Available bromine = approximately 23%

KEEP OUT OF REACH OF CHILDREN
DANGER

FIRST AID

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses if present after the first 5 minutes, then continue rinsing eyes.
- Call a poison center or a doctor for treatment advice.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or a doctor for treatment advice.

NOTE TO PHYSICIAN:
- Chemical eye burns may require extended irrigation. Obtain prompt consultation, preferably from an ophthalmologist. If burn is present, treat as any thermal burn, after decontamination.
- Treatment of exposure should be directed at the control of symptoms and the clinical condition of the patient.

For emergency information on this product, call the National Pesticides Information Center at 1-800-858-7378, 8:30AM to 4:30PM. During other times, call the poison control center at 1-800-222-1222. Both numbers are 7 days/week.

For control of microorganisms in industrial water systems add sufficient product to the air washer sump or chilled water to provide a total bromine level of 1.0-1.5 ppm throughout the system. The total bromine level should be checked with a test kit and additional product should be applied until a sufficient residual is obtained at the bleed-off point. Some systems may be maintained in satisfactory biological condition by applying this dosage once per day while others will respond better to dosages more or less than once per day.

COOLING PONDS, LINED RESERVOIRS AND DECORATIVE FOUNTAINS: (not for use in New York) This product may be applied at the lined reservoir, pond, or fountain inlet or at a location that permits complete diffusion into the water at maximum retention time before reaching the outlet. Sufficient product should be fed to maintain a total bromine level of 1.0-1.5 ppm in all parts of the reservoir or pond (two fluid ounces per 1000 gallons of water yields 5.1 ppm total bromine).

AIR WASHERS: (This product may be used only in industrial air washers and air washer systems which have mist-eliminating components.) For control of microorganisms in industrial washer and air washer systems add sufficient product. This product is designed for the air washer sump or chilled water to provide a total bromine level of 1.0-1.5 ppm throughout the system. The total bromine level should be checked with a test kit and additional product should be applied until a sufficient residual is obtained at the bleed-off point. Some systems may be maintained in satisfactory biological condition by applying this dosage once per day while others will respond better to dosages more or less than once per day.

SHELL EGG PASTEURIZER WATER SYSTEMS: (not for use in California) For control of bacteria and associated slime in shell egg pasteurizer water systems add 1-3 ounces of this product per 1000 gallons of water to system water to achieve control. To maintain control add sufficient product to maintain 2.5-7.5 ppm total bromine throughout the system. (Two fluid ounces per 1000 gallons of water yields 5.1 ppm total bromine).

FOR PULP & PAPER MILL INFLUENT WATER SYSTEMS: (not for use in California) This product should be added to the raw water intake prior to the filter house, economizer, or process water. Feed at a dosage sufficient to provide a total bromine level of 1.0-9.0 ppm. This product at a dosage of two fluid ounces per 1000 gallons of water gives a residual of approximately 5.1 ppm of total bromine, but a different dosage may be required to provide adequate control throughout the system. Some systems may be maintained in satisfactory biological condition by applying this dosage intermittently while others may require a continuous application. This product may be used in pulp and paper mill process water systems where the manufactured paper or paperboard may be used for food contact purposes.

FOR PULP & PAPER MILL PROCESS WATER SYSTEMS: (not for use in California) This product should be added to a paper making system at a point of uniform mixing such as the beaters, broke chest pump, save-all tank, or white water tank. Feed at a dosage sufficient to provide a total bromine level of 1.5-9.0 ppm. This product at a dosage of two fluid ounces per 1000 gallons of water gives a dosage of approximately 5.1 ppm of total bromine, but a different dosage may be required to provide a adequate control throughout the system. Some systems may be maintained in satisfactory biological condition by applying this dosage intermittently while others may require a continuous application. This product may be used in pulp and paper mill process water systems where the manufactured paper or paperboard may be used for food contact purposes.

OIL AND SECONDARY OIL RECOVERY SYSTEMS, DRILLING MUDS AND PACKER FLUIDS: (not for use in California) This product may be used to treat water used in primary or secondary oil or gas recovery systems to control the growth of anaerobic sulfide-forming bacteria and aerobic slime-forming bacteria. This product may be used in seawater or fresh water recycled or disposal/recovery systems, muds or fluids. This product controls biological and slime deposits on pumps, pipework, heat exchangers, and filters associated with oilfield and gasfield systems. It also controls biofilm deposits downhole in formations. Add sufficient amount of this product to achieve a residual total bromine level of 2.2-5.0 ppm. A dosage of two fluid ounces per 1000 gallons of water yields approximately 5.1 ppm of total bromine.

NOTE: Halogen dosages listed in these various applications are expressed as total bromine.

Since most field test kits for oxidizing halogens give values in terms of chlorine, simply multiply the reading from the test kit (as chlorine) by 2.25 in order to obtain the bromine equivalency listed in these directions.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CORROSIVE. Causes irreversible eye damage and skin burns. Do not get in eyes, on skin or on clothing. Wear goggles or face shield. Wear coveralls worn over long sleeved shirts and long pants, socks, chemically resistant footwear and chemically resistant gloves. When mixing or loading wear chemically resistant apron. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

ENVIRONMENTAL HAZARDS. This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or public waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of EPA.

STORAGE AND DISPOSAL

Store this product in a cool dry area, away from direct sunlight and heat to avoid deterioration. In case of spill, flood areas with large quantities of water. Product or rinsates that cannot be rinsed should be diluted with water and disposed of as a sanitary waste.

PESTICIDE DISPOSAL: Pesticide disposal wastes are acutely hazardous. Improper disposal of excess pesticide spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: PLASTIC CONTAINERS: Nonrefillable container. Do not use this container to hold materials other than pesticides or dilute pesticides (rinsate). After emptying and cleaning, it may be allowable to temporarily hold rinsate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Clean container promptly after emptying. Offer for recycling if available.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times.
