

YOUR SECRET WEAPON FOR WASTEWATER DISINFECTION

PERAGREEN® WW is a complete disinfection option for municipal wastewater operations, with no harsh by-products and no neutralizing agent required. Enviro Tech developed this proprietary peracetic acid (PAA) formulation specifically to control bacteria and algae growth in wastewater treatment systems.

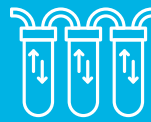

Fast acting and short lasting, **PERAGREEN® WW** is a powerful oxidizer that reduces pathogens by 25% within five seconds of dosing, then breaks down into harmless oxygen and vinegar.

Available in both 15% and 22% concentrations, **PERAGREEN® WW** may be used in various applications throughout the treatment train, including for debulking control, or in conjunction with other disinfection methods, such as UV light, for enhanced bacterial control.

Advantages

- High reactivity and oxidation potential
- Bactericidal and algacidal properties
- Decreases the disinfection chemical cost
- Less corrosive than alternative chemistries
- Reliable supply

Uses

- Primary, secondary & tertiary disinfection
- UV enhancement & bulb cleaning
- Membrane filtration cleaning

Enviro Tech, an Arxada company, is one of the nation's largest peracetic acid manufacturers and an expert in EPA-registered biocides for the wastewater treatment industry.
