

Best Practices to Avoid Highly Pathogenic *Avian Influenza* (HPAI)

By implementing effective daily biosecurity measures, you can significantly mitigate the chances of individuals, animals, machinery, or vehicles becoming carriers of infectious diseases such as HPAI.

■ Minimize cross-contamination on and off the farm.

- Implement a foot pan protocol at all entry points into bird housing areas.
- Disinfect equipment and tools prior to use.
- Disinfect all vehicle tires that enter the farm premise.
- Enforce strict hand-washing protocols before and after any bird handling.
- Eliminate any unnecessary traffic and visitors.

■ Stay vigilant! Know the locations experiencing HPAI outbreaks and refrain from traveling to those areas.

■ Remove as many environmental challenges to your flock as possible.

- HPAI can spread through drinking water. Continuous water treatment and line cleaning programs minimize the buildup and spread of pathogens to the birds via water consumption.

■ Monitor your facility and employees:

- Identify and secure vulnerable locations where wild birds can get into your barns.
- Cultivate a biosecurity culture among employees.
- Ensure that employees who work in multiple locations have designated footwear for each site and sanitize their vehicles upon entry.
- Implement a visitor log at every main entry point.

Our Safeguards Against Avian Influenza

PERAGUARD®

A one of a kind, dry, peracetic acid-based EPA approved product. With proven testing against Avian Influenza and a dry, granular presentation, **PeraGuard®** is the ideal cold-weather solution for foot pan biosecurity.

PERASAN® A

An EPA approved, 5% peracetic acid hard surface disinfectant that can be used on poultry premises. When used as directed, **Perasan® A** is effective against Influenza A viruses with a 2-minute contact time.

SURECIDE AH

A chlorine dioxide precursor that is EPA approved for continuous use in poultry drinking water. Ensuring your birds have a continuous source of treated drinking water will improve consumption and overall bird health and performance.

PROMAX®

A premium fast-acting water line cleaner that removes scale and other architecture that supports the formation of biofilm in poultry and livestock drinking water systems.
